

Phase 1 - App Modules Detailed Description

This document provides a complete explanation of all modules in Phase 1 of the application. It includes each module's purpose, function descriptions, and summary points to help QA engineers understand features clearly before writing test cases.

1. Super Admin Module

Purpose:

This is the main control center of the entire system. The Super Admin manages everything — leads, employees, contacts, and promotional materials. They have full access and can view and manage all system data.

Functions:

- **Dashboard –**

Displays total leads, assigned/unassigned leads, and lead statistics through bar charts (monthly/weekly).

- **Employees –**

Used to add, edit, view, and delete employee details. It helps manage user access across the system.

- **Lead Management –**

Allows the creation, listing, filtering, editing, viewing, and deletion of leads. Helps track and manage all customer leads in one place.

- **Log Actions –**

Records all user activities such as adding, editing, or deleting data with timestamps. Ensures accountability and transparency.

- **Manage Contacts –**

Used to store and manage contact information such as client or partner details.

- **Promotion Medias / Testimonials / News / Banners –**

Manages promotional materials like images, client testimonials, company news, and banners displayed on the platform.

2. Admin Module

Purpose:

Admins have restricted access compared to Super Admins. They can only manage leads, employees, and promotional content related to their specific branch or team.

Functions:

• Dashboard

– Shows the total leads, assigned/unassigned leads, and lead count charts for the Admin's own branch.

• Employees –

Admins can manage employees working under them. They can add, edit, view, and delete employees in their team.

• Lead Management –

Admins can create, view, edit, delete, and filter leads belonging to their team. They can also track user actions through logs.

• Promotion Medias / Testimonials / News / Banners –

Used for managing local or branch-level marketing content like banners, promotions, and updates.

3. Sales Module

Purpose:

Sales users manage their assigned leads and perform daily sales activities. They only have access to the data related to their assigned leads and personal dashboard.

Functions:

• **Dashboard –**

Displays total leads, overdue leads, and paid member leads for the logged-in sales user. Also includes a bar chart for weekly or monthly lead tracking.

• **Today's Task –**

Lists all the tasks and follow-ups assigned to the sales user for the current day.

• **Lead Management –**

Allows sales users to create, view, edit, and update their assigned leads. Users can also view the activity log for any lead updates.

Quick Summary

Module	Who Uses It	What It Controls	Purpose
Super Admin	Top-level management	Full system (all data and users)	Overall system monitoring and configuration
Admin	Branch or regional admin	Own team's leads, users, and content	Manage team operations and reports
Sales	Sales employee	Own assigned leads and tasks	Daily work and lead follow-up management

Key Points Summary

- Super Admin – Has full system access. Can manage users, leads, and promotional data.
- Admin – Has limited control. Can manage data related to their branch or team only.
- Sales – Has the least access. Can only handle their assigned leads and daily tasks.
- Common Features – All modules include Dashboard and Lead Management functions.
- Extra Features (Super Admin Only) – Logs, Contact Management, and Promotional Media Management.
- Primary Goal – Ensure smooth data flow between teams with proper access levels and tracking.
